Open-source Research Projects

Summit: Scaling Deep Learning Interpretability by Visualizing Activation and Attribution Summarizations
Summit is an interactive visualization that scalably summarizes what features a deep learning model has learned and how those features interact to make predictions. It is published at IEEE VIS (VAST), 2019.

MLsploit: A Framework for Interactive Experimentation with Adversarial Machine Learning Research
MLsploit is a user-friendly, cloud-based system that enables researchers and practitioners to rapidly evaluate and compare state-of-the-art adversarial attacks and defenses for machine learning (ML) models. It is published at Knowledge Discovery and Data Mining (KDD) Workshop - Project Showcase, 2019.

SIDE: Representation Learning in Signed Directed Networks
SIDE is a general network embedding method that represents both sign and direction of edges in the embedding space. It is published at the Web Conference (WWW), 2018.

A Comparative Study of Matrix Factorization and Random Walk with Restart in Recommender Systems
We provide a comparative study of matrix factorization and RWR, which are the most representative recommender systems. It is published at IEEE Big Data, 2017.
