

Haekyu Park

haekyu@gatech.edu · haekyu.com · [Curriculum Vitae](#) · [Google Scholar](#)

My research goal is to enhance **machine learning interpretability**, to enable:

- **Confident use of machine learning**, by helping people interpret and trust the models
- **Effective model debugging and improvement**, by promoting practitioners' understanding of why a model would not work well and providing insights into how to fix it
- **Broadening access to machine learning**, by encouraging people of diverse backgrounds to easily learn and leverage the technologies.

Specifically, I design and develop interactive visualization systems to interpret machine learning models. I am a member of the [Polo Club of Data Science](#) at Georgia Tech. I have been fortunate to work with amazing researchers, engineers, and scientists at NVIDIA and Intel.

Education

Georgia Institute of Technology

Ph.D., Computer Science

Advisor: Dr. [Polo Chau](#)

Aug 2018 - Present

Seoul National University

B.S., Computer Science and Engineering

Graduated with honors (Cum Laude)

Mar 2012 - Aug 2017

Research Experience

AI Infrastructure Software Intern

May 2020 - Jul 2020

NVIDIA, Santa Clara, CA

Mentor: Joe Eaton, Brad Rees, Bartley Richardson

Developed a visual graph analytics, allowing for interactively running multiple graph algorithms in real-time on large graphs.

Leveraged GPU acceleration for both data analysis and rendering side.

Data Science Intern

May 2019 - Aug 2019

NVIDIA, Austin, TX

Mentor: Bartley Richardson, Brad Rees, Joe Eaton

Internship results are integrated into NVIDIA RAPIDS team's [cybersecurity usecase notebook](#), presented at [KDD 2019 NVIDIA RAPIDS tutorial](#).

Graduate Research Assistant
Georgia Institute of Technology, Atlanta, GA

Aug 2018 - Present

Undergraduate Research Assistant
Seoul National University, Seoul, Republic of Korea

June 2016 - Aug 2017

Awards & Honors

"Thank a Teacher" Award 2019
Center of Teaching & Learning (CTL), Georgia Institute of Technology

Moon-Jung Chung Scholarship 2019
KOCSEA (The Korean Computer Scientists and Engineers Association in America)

National Scholarship for Science and Engineering 2015
National Scholarship for Science and Engineering

Grants & Funding

WiML Travel Funding 2019
\$550 Travel Funding
Women in Machine Learning Workshop, co-located with NeurIPS

Amazon AWS Research Grant 2018
Funded \$5,000 in AWS cloud credits
Co-PIs: Nilaksh Das, Scott Freitas, Duen Horng Chau

Publication

SkeletonVis: Interactive Visualization for Understanding Adversarial Attacks on Human Action Recognition Models

Haekyu Park, Zijie J. Wang, Nilaksh Das, Anindya S. Paul, Pruthvi Perumalla, Zhiyan Zhou, and Duen Horng Chau
AAAI, Demo, Virtual, 2021.

Open-Source Research Projects

CNN Explainer: Learning Convolutional Neural Networks with Interactive Visualization

2020

Keywords: Deep Learning Education, Interactive Visualization, Interactive Animation

Interactive visual system for learning Convolutional Neural Networks.

It was published at IEEE VIS (VAST, TVCG), 2020.

Zijie Jay Wang, Robert Turko, Omar Shaikh, [Haekyu Park](#), Nilaksh Das, Fred Hohman, Minsuk Kahng, Duen Horng (Polo) Chau

[▶ Demo](#) [🔗 Top of Github Trending](#) [★ 4,905 Github stars \(as of Oct 2020\)](#)

Bluff: Interactively Deciphering Adversarial Attacks on Deep Neural Networks

2020

Keywords: Adversarial Attacks, Neural Network Interpretability, Activation Pathways, Interactive Visual Analytics

Interactive system for visualizing, characterizing, and deciphering adversarial attacks on vision-based neural networks.

It was published at IEEE VIS, 2020.

Nilaksh Das*, [Haekyu Park](#)*, Zijie Jay Wang, Fred Hohman, Robert Firstman, Emily Rogers, Duen Horng Chau

(* Equal Contribution)

[▶ Demo](#)

Summit: Scaling Deep Learning Interpretability by Visualizing Activation and Attribution Summarizations

2019

Keywords: Neural Network Interpretability, Attribution Graph, Interactive Visual Analytics

Interactive visualization that scalably summarizes what features a deep learning model has learned and how those features interact to make predictions.

It was published at IEEE VIS (VAST, TVCG), 2019.

Fred Hohman, [Haekyu Park](#), Caleb Robinson, Duen Horng Chau

[▶ Demo](#)

MLsploit: A Framework for Interactive Experimentation with Adversarial Machine Learning Research

2019

Keywords: Adversarial Attacks and Defenses for Machine Learning Models, Interactive Experimentation

User-friendly, cloud-based system that enables researchers and practitioners to rapidly evaluate and compare state-of-the-art adversarial attacks and defenses for machine learning (ML) models.

It was published at a KDD 2019 Project Showcase.

[▶ Demo](#)

SIDE: Representation Learning in Signed Directed Networks

2018

Keywords: Network Embedding, Signed Weighted Directed Graph

General network embedding method that represents both sign and direction of edges in the embedding space.

It was published at the Web Conference (WWW), 2018.

[🔗 Project](#)

A Comparative Study of Matrix Factorization and Random Walk with Restart in Recommender Systems

2017

Keywords: Recommender System, Matrix Factorization, Random Walk with Restart

We provide a comparative study of matrix factorization and RWR, which are the most representative recommender systems.

It was published at IEEE Big Data, 2017.

[🔗 Project](#)

Other Projects

DARPA Guaranteeing AI Robustness against Deception (GARD)

2020

Keywords: Defenses for Adversarial Examples, Robustness, Defense using Semantic Coherence

We develop defenses for adversarial attacks on object detector for both RGB images and single-camera video. We augment this object detector to support spatial, temporal, semantic coherence in videos.

RAPIDS and Cybersecurity: A Network Use Case

2019

Keywords: RAPIDS, NVIDIA, GPU-acceleration, Graph, Personalized Page Rank

We showcase an approach to flagging anomalous network communications in a large graph using a combination of structural graph features and graph analytics, running end-to-end in RAPIDS.

Presented at [KDD 2019 NVIDIA RAPIDS tutorial](#) with the [cybersecurity use case notebook](#).

Recommender System for Videos on Oksusu Application

2017

Keywords: Deep Learning, Sequence/Word Embedding, Approx. k-NN, Heterogeneous Features

Our system recommends videos to users of Oksusu application, handling massive data on users' behaviors and heterogeneous information of videos.

SK Telecom, Seoul, Republic of Korea

A Fast Data Compression with Shared Virtual Memory in Heterogeneous System Architecture

2017

Keywords: OpenCL, GPGPU, SVM, HSA

I used general purpose computing on graphics processing units (GPGPU) and Shared Virtual Memory (SVM) in Heterogeneous System Architecture (HSA) for fast data deduplication methods. GPGPU and HSA provide a powerful basis for parallel computing in an easy programmable and efficient way.

Undergraduate thesis

Personalized Recommendation for Credit Card Rewards

2016

Keywords: Coupled Matrix Factorization, Time Series Data

We provide personalized recommendations for credit card rewards to customers using various side information of users and items. The main algorithm is TCMF (Time Coupled Matrix Factorization).

Hyundai Card, Seoul, Republic of Korea
